

DZ-Manager™ Online-Tools – Online booking and account management tool

DZ-Manager™ also includes **Online tools** where customers can book Tandems or courses. Furthermore it allows skydivers to manage their account, review their jumps and transfer funds to their jump-account at the drop zone using a credit card or direct debit.

- discounts for big groups or certain weekdays are automatically applied
- number of slots to be available for booking can be configured very precisely and taken slots will not be available anymore

The DZ-Manager™ Online-Tools **can either be used** as a stand-alone web application or can be embedded in your existing web page.

Another great feature is **account management**. Now skydivers can transfer funds onto their jump account from home.

Here you can recharge your account.

Your current balance is **-572,99**.

We use a secure connection to protect the privacy and security of your personal information.

Enter, verify, or edit the information below and click **Recharge**.

Payment Type:
We accept:

Please ensure the address used is the address you have associated with the payment type you have selected. This address will be only used for card validation purposes.

*Country: **Germany**

*Address Line 1: **Hauptstr. 73** Address Line 2: **OG**

*City: **Cologne** *State: **NRW**

*Zip Code: **50996**

The DZ-Manager™ Online tools do not need the main DZ-Manager™ application to run. However both work together very well.

For example when a **Tandem** is **booked** via the DZ-Manager™ Online tools it shows up in DZ-Manager™ immediately.

This has several advantages compared to the classic way of booking:

- customers enter all their data by themselves; no more need for your staff to answer eMails / phone calls and keep track of all the bookings
- customers can choose a certain date for the jump or purchase a gift certificate

In addition skydivers can review jumps made in the past at your dropzone including all kinds of information like:

- Date, price and payer
- Group size, altitude and aircraft

Last but not least they can manifest, print waivers or edit personal data like their address.

The embedded version perfectly fits into any existing webpage, therefore customers will not need to leave the drop zone's webpage for booking.

You can make use of the DZ-Manager™ Online-Tools in different ways

- run them on your own web server
- have them hosted on our web server

The DZ-Manager™ Online-Tools come with DZ-Manager™ Professional for free. Customers of DZ-Manager Personal can use the hosted version or purchase them separately.

Another module of the DZ-Manager™ Online tools is the **web based load-monitor** which allows jumpers and pilots to monitor their loads and manifest themselves.

All parts / modules like

- Booking
- Account management
- Load-List

can be enabled / disabled and configured individually.

The DZ-Manager™ Online-Tools can either be made available on your intranet only or world-wide on the internet.

or contact us for an individual offer.

References:

- DZ-Manager™ is used on more than 200 drop zones worldwide.
- In 2010 jumps worth far more than 1 Mio. EUR were manifested using DZ-Manager™
- Major events with over 200 jumpers at once are organized with the help of DZ-Manager™ for years to the satisfaction of drop zone owners as well as jumpers.
